

IT'S TIME FOR TELEMEDICINE.

Benefits of Remote Patient Monitoring

The value of remote patient monitoring is becoming increasingly obvious and further highlighted during the most recent coronavirus pandemic. The return on investment for the patient, provider, and payors has driven a rapid expansion in the use of rpm. Monitoring remotely allows engagement with your patients in an efficient digital fashion, allowing for real time actionable items. These actions may lead to early interventions, improving health and saving the health system millions.

Medicare having realized the value of RPM has created a financial incentive to promote physicians engaging and enrolling their patients.

Existing clinical staff who are already connected with your patients can easily integrate into their daily work

flow. Cura RPM software is easily accessible from any browser.

This works well with the Merit Based incentive payment system and shared savings programs developing, particularly important is the second stage of CPC+ and Bundled Payment Care Incentive (BPCI). Don't let your practice fall behind, explore RPM implementation into your practice today.

Further the workflow is nicely integrated with CCM (Chronic Care Management) and BHI (Behavioral Health Integration Services).

Value has been shown in patient outcomes in COPD, diabetes and hypertension with other studies underway.
